Skills

HTML | CSS | JS | PHP | WordPress | Python

I possess thirteen years' experience writing hand-coded front-end HTML, CSS and JS, often on top of a highly-extended WordPress back-end and using modern development/build processes, and I build sites with the following in mind:

- implementation of latest improvements provided by HTML and CSS specs and browser APIs with graceful fallbacks for older browsers where needed
- optimization of page speed/performance for both mobile and desktop users
- mindfulness re: reinventing the wheel: using of JS libraries like jQuery where they are most effective, writing vanilla JS with no dependencies when possible; likewise, implementing well-established and currently-maintained plugins where they make the most sense, hand-crafting plugins to fulfill the most client-specific needs
- content- and user experience-oriented/focused design
- enhanced accessibility
- observation of common SEO best practices
- compliance with web standards
- adherence to WordPress coding standards and best practices

Experience

Freelance / Web developer and designer

AUGUST 2009 - PRESENT, DENTON, TX, SEATTLE, WA and NYC, NY

Direct clients include SSA Marine and NanoString; I also contract with agencies like Turnstyle and Teague to help with their client work. Highlights include a dynamically populated locations-management system for SSA, a consumables experiment planner for NanoString, a conference registration and continuing education credits management system for TxABA, and a highly performant, ground-up rebuild of a Dash 8 Freighter microsite for Teague. (Also: countless websites for friends' bands.)

Creative Circle / Web developer and designer

APRIL 2015 - PRESENT, SEATTLE, WA

Worked short- and long-term contracts with many Creative Circle clients, including enterprise clients like K2, Avalara, and NanoString. Highlights include a microsite for the K2/Ride Snowboards Warpig release and a tax calculation API for Avalara (also for Avalara: a massive

amount of work improving the performance of their
then-WordPress-built site).

35 Denton / Web developer and designer
SEPTEMBER 2011 - MARCH 2015, DENTON, TX and SEATTLE, WA

Designed, built and maintained the website for a music festival in
Denton, TX. Highlights included a massively usable, personalizable show
calendar, as well as implementation of a venue capacity indicator that
helped audiences more evenly distribute themselves throughout the
festival's many venues.

Swash Labs / UI/X developer
SEPTEMBER 2013 - APRIL 2015, DENTON, TX and SEATTLE, WA

Built new sites, and maintained legacy sites, for a boutique creative
agency that specialized in social media ad buys, retargeting and analytics.
Clients included [Little Guys Movers](#), [Penders Music](#), and [Armadillo Ale
Works](#).

Animal Care Technologies / Front-end/interface developer
SEPTEMBER 2012 - DECEMBER 2013, DENTON, TX

Worked on the back-end interface for management of veterinary client
and patient information in a primarily UX-focused role for this veterinary
software company.

eInstruction / Tier II support technician
SEPTEMBER 2006 - APRIL 2009, DENTON, TX

Worked first in seasonal temp/hourly customer service / technical
support, then full-time as a Tier I, and eventually Tier II, technician. It was
at eInstruction, an educational software company, where I first learned
anything about programming and became interested in web
development.

Education

University of North Texas / International development
AUGUST 2008 - JUNE 2010, DENTON, TX

University of North Texas / Jazz guitar performance
AUGUST 2002 - DECEMBER 2004, DENTON, TX
